

Web-Mining: Simply host our code on your website or app for free and start earning. An alternative form of Monetization.

Merged Mining: The only web-miner to allow simultaneous mining of different coins based on similar algorithms. Providing Greater security to auxiliary chains, & increased profits for Publishers.

Interoperable Smart Contracts: introducing Smart Contract capability that will enable the unification of blockchains through Gath3r and private masternode networks.

Masternodes: Gath3r runs on a hybrid blockchain, which means that owners of the GTH coin can earn monthly commissions by setting up masternodes and help secure the Gath3r ecosystem.

Web/Mobile Staking: Gath3r's loyalty program allows publishers to share their earning with users. In turn, users can automatically stake and earn coins in either a web or mobile wallet.

Gath3r Foundation: it's purpose is to help increase adoption of the GTH chain by Awarding grants to projects who would then build on the GTH chain.

Gath3r.io

Web Monetization with Decentralized Blockchains, Masternodes, Merged Mining and Interoperable Smart-contracts
